

AASHTO TC3 Stormwater Series

Self-paced, web-based training

The Construction Stormwater Series is a five-part, all-encompassing series that trains agency engineers and inspectors in construction topics related to stormwater system installation, maintenance, and inspection. The training provides intermediate and advanced principles related to stormwater management. The five modules in the series are:

1. Introduction to Stormwater Management
2. Pollution Prevention
3. Sediment Control
4. Erosion Control
5. Temporary Drainage Management

The Construction Stormwater Series is based on the *Construction Stormwater Field Guide*, which is available at https://environment.transportation.org/pdf/field_guides/field_guide_construction_stormwater.pdf.

Registration*

No cost to attend

Questions? E-mail ctt@mtu.edu

*After registering, the Center for Technology & Training will send you an e-mail with your free access code for this training. Participants can earn up to 5 professional development hours for participating in this series. After completing this series, participants will receive a certificate of completion from AASHTO TC3.

The AASHTO TC3 training catalogue is now available to Michigan local agencies for *free*! TC3 trainings are high-quality, self-paced, web-based modules that cost \$75 to \$450 per person. A national agreement with LTAP centers makes these modules available for *free* to Michigan local agencies. Classes range from 30-minute sessions to multi-part series and can count toward professional development hours.
